

## Starting

Pradaxa

Select the Patient's Age:

less than  
**75 years**

equal to, or greater than  
**75 years**

**150** mg bd

Pradaxa Dose

Pradaxa 110 mg bd may be considered for patients <75 years with:

- a potentially higher risk pf major bleeding or
- moderate renal impairment (CrCl 30-50 mL/min)

**① Assess Renal Function before starting streatment.**

Renal function must be assessed before commencing Pradaxa to exclude patients with severe renal impairment.

Pradaxa is contraindicated in patients with severe renal impairment (CrCL < 30 mL/min).
